CLAIM AMENDMENTS

1. (Currently Amended) An article enabling a spray bottle to be suspended from an ironing board or other surface, the spray bottle including a neck portion to which a manually operated spray head attaches, ~~the spray head having an upper extent and a forward, manually operated trigger,~~ the article comprising:

a shaped body having a lower end ~~with an aperture~~ including a continuous ring of material forming an aperture configured for coupling to a neck of a spray bottle; and

a side member extending upwardly from the lower end, the side member terminating in a bent upper lip located directly above the aperture for hanging a spray bottle coupled thereto.

2. (Canceled)

3. (Currently Amended) The article of claim 1, wherein the ~~[[body]]~~ side member includes a concave indent curved-back surface.

4. (Canceled)

5. (Original) The article of claim 1, wherein the upper lip includes a surface or feature to enhance friction or holding capability.

6. (New) The article of claim 1, wherein the shaped body is made of molded plastic.

7. (New) An article enabling a spray bottle to be suspended from an ironing board or other surface, the spray bottle including a neck portion to which a manually operated spray head attaches, the article comprising:

a molded plastic body having a lower end with an aperture configured for coupling to a neck of a spray bottle; and

a side member extending upwardly from the lower end, the side member terminating in a bent upper lip located directly above the aperture for hanging a spray bottle coupled thereto.

8. (New) The article of claim 7, wherein the side member includes a concave indent.

9. (New) The article of claim 7, wherein the upper lip includes a surface or feature to enhance friction or holding capability.

10. (New) An article enabling a spray bottle to be suspended from an ironing board or other surface, the spray bottle including a neck portion to which a manually operated spray head attaches, the article comprising:

a molded plastic body having a lower end with an aperture configured for coupling to a neck of a spray bottle; and

a side member extending upwardly from the lower end, the side member including a concave indent terminating in a bent upper lip located directly above the aperture for hanging a spray bottle coupled thereto.

11. (New) The article of claim 10, wherein the side member includes a concave indent.

12. (New) The article of claim 10, wherein the upper lip includes a surface or feature to enhance friction or holding capability.

13. (New) A method of hanging a spray bottle from a surface, comprising the steps of:
providing the article of claim 1;

removing the spray head from the spray bottle;

placing the aperture over the neck of the spray bottle;

returning the spray head to the spray bottle to retain the article; and

hanging the spray bottle from a surface using the upper lip.
